STUDENT NAME:

MONDAY GROUP 1st GENERAL QUIZ

DATE: 03/10/2022

DURATION: 45 Minutes

SECTION A: Respond with either TRUE OR FALSE (10 Marks)

1. PL/SQL programs are case sensitive

2. It is possible to have a PL/SQL program that has no header sections

3. The command SET SERVEROUTPUT ON is used to print the output in an PL/SQL program

4. A constant's value can be changed during a program execution

5. The referential data types: %type and %rowtype can be used in the same context

6. PL/SQL allows the declaration of user defined exceptions

7. It is possible to have more than one user defined exceptions in the same program

8. The CASE_NOT_FOUND exception is raised when trying to open an opened cursor

9. PL/SQL allows users to assign default values during variable declaration

10. It is possible declare another variable in PL/SQL during the EXECUTION section of a PL/SQL program

SECTION B: Use the table provided to respond to this question (10 marks)

Write a PL/SQL program that prompts for an employee's code and checks whether an employee's salary range is not between \$2500 and \$5000. If the salary is in the specified range, the program should raise an exception saying that the salary is out of range. Otherwise, the program should print the message 'The bonus should be added'. Make sure that the program handles all possible exceptions.

code (integer)	e_first_name (varchar)	e_last_name (varchar)	Sal (float)
1	Louis	Vuiton	4500.25
2	Anne	Franck	3750.75
3	Bruce	Wayne	6000.57
